

Theses: Proposal content of the basic rope techniques training for special units of the Police Czech Republic

Name: Jan Horelica

Place of work: Department of Military Sports

Thesis Supervisor: kpt. Mgr. Erik Barták

Year of the theses defence: 2010

Summary:

Work objectives: Analysis of the basic rope techniques training of working at heights with special units of the Police Czech Republic. Content processing of the basic rope training techniques for special units of the Police Czech Republic.

Methods: Analysis of the basic rope techniques training of working at heights with special units of the Police Czech Republic were carried out in the research section. The analysis used qualitative methods of collecting data namely group discussions with instructors of special units of the Police Czech Republic working at heights. Within the qualitative research I also searched internal regulation for the implementation of the work of the special police units of the Czech Republic. When writing the theoretical part of theses I also made a search of other technical literature.

Results: In the submitted theses I was able to analyze content area of basic rope techniques of working at heights with special units of the Police Czech Republic and identify certain deficiencies in the training. On the basis of these findings I made a proposal of the training content of the basic rope techniques for special units of the Police Czech Republic.

Keywords: working in heights, fighter - climber, instructor - climber, basic rope techniques, special units of the Police Czech Republic.
